Making GDPR a strategic advantage

Our **Compliance Pro** platform will enable you to confidently manage data privacy across your business.

A comprehensive privacy compliance platform

The 25th May 2018 marked a shift in the management of data privacy for businesses. Tighter regulatory requirements mean it is more important than ever to understand and respect the privacy of individuals whose data they process.

Data privacy and information security is undergoing massive change in every industry. The increase in connected devices and growing cyber threats, combined with poorly implemented data privacy frameworks and security controls make personal data safety a growing concern. This, in conjunction with new data privacy regulation, has put Data Privacy and Information Security at the forefront of every organisations agenda.

Unfortunately, these areas are often seen as complex to navigate and expensive to address. **Safe Data Governance** have developed practical, cost effective solutions that will help businesses and managers understand and rise to these challenges.

Our **Compliance Pro** platform provides an intuitive solution with which to manage GDPR compliance via a secure online portal.

The modular system can be tailored to the needs of SME's, including sole traders and micro organisations. It is designed to help Business Owners, Managers and Data Privacy Representatives to establish a Data Privacy Framework, and can be used by Service Providers as a tool to help their clients meet data privacy compliance needs.

Compliance Pro is for you, if:

- ✓ You are seeking a simple, centralised solution to help with compliance
- ✓ You want to implement a data privacy framework but are unsure how to start
- ✓ You need an integrated platform to manage all of your GDPR compliance activities

It will enable you to:

- ✓ Save time meeting your obligations through a clear, self-guided process
- ✓ Demonstrate cost effective compliance without complicated, expensive systems
- ✓ Access quality advice and information from industry experts
- ✓ Easily manage, and demonstrate, compliance across your business

Our philosophy

We recognise that many templated systems risk becoming 'tick-box' exercises. So we have designed our platform to make people think about the implications of the data processing activities they are performing, in order to develop a truly beneficial privacy framework.

With this in mind we have developed a philosophy that we feel embodies the correct approach to data privacy. It reflects the intent of privacy laws and regulations, provides a guiding principle for organisations and respects the needs of the Data Subjects.

Gather – limit what you gather in line with your processing requirements and understand your lawful grounds for processing.

Inform – communicate what will happen with data to data subjects, internal parties and external parties using privacy notices, agreements and training programs.

Respect – demonstrate a data subject focussed approach. Understand their rights, don't keep data any longer than necessary and handle data with respect.

Protect – organisations have an obligation to protect personal data under their control, understand the risks and ensure that security measures are applied.

The **Compliance Pro** platform enables a complete overview of personal data processed by the organisation. It brings together all your compliance information into one simple to use application. More than compliance, our platform also forms the foundation of a robust Data Privacy Framework.

All documents and information are stored in the platform's secure cloud-based environment. These can then be accessed by designated users, with defined permissions, allowing them to manage and update as required.

Our easy to follow, step-by-step process guides users through a range of compliance objectives. It provides guidance notes at each stage as well as a range of carefully designed tools to address Risk, Security and Task Management.

Compliance Pro features:

Intuitive

Easy to use, adapting to information provided by you

Logical

Process driven, reducing risk and administration

Scalable

Cost effective, suitable for large and small organisations

Comprehensive

Addresses both legal and security obligations

Written by industry experts, rest assured that your clients have the right process in place to comply and succeed at GDPR.

Additional Features:

Risk Management

Choose from 3 common Risk Management methodologies to carry out your risk assessments.

Resource Security Management

Identify your data processing resources and define clear and effective security measures.

Task Management

A built in Task Management System will become your best friend as you manage your compliance objectives.

Incident and Breach Management

Record, analyse and report on security incidents and data breaches whilst reducing impact and mitigating risk.

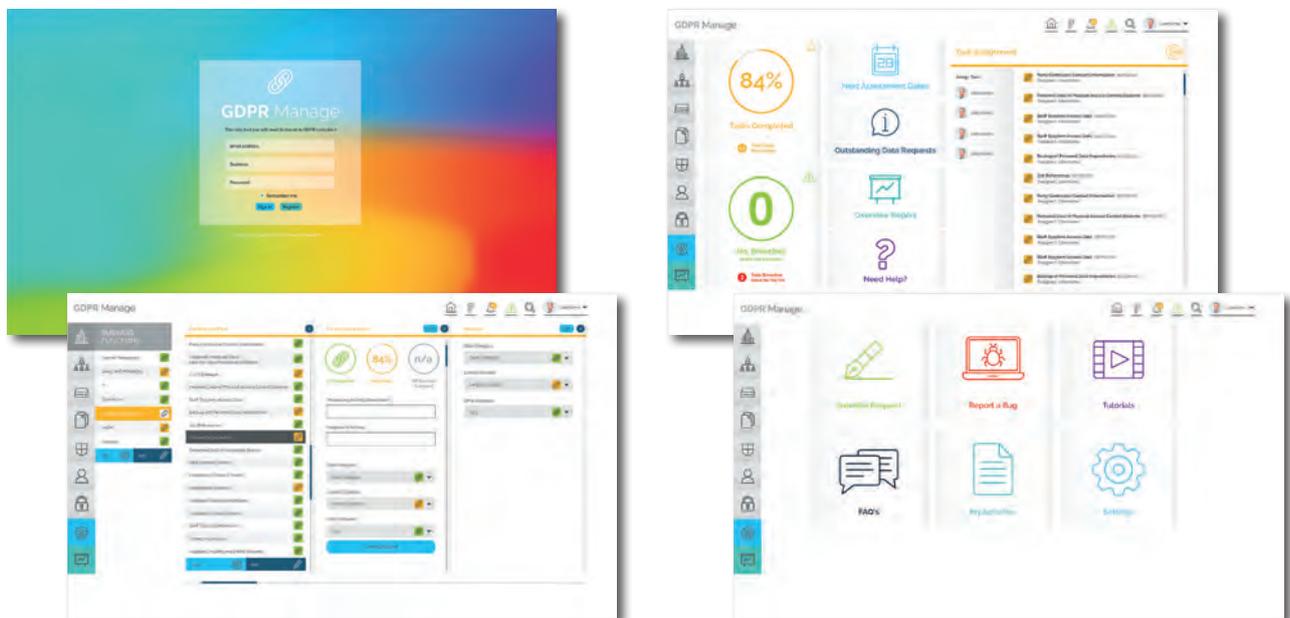

Management of Subject Access Requests

Efficiently manage and respond to requests made by data subjects.

How will your business manage ongoing GDPR compliance?

Many businesses are struggling to implement a fully integrated, cost effective system to help with GDPR compliance. Our goal is to provide businesses with an easy to access, centrally managed solution.

Intuitive and self-guided, the process-driven system will ensure that you understand, document and review all aspects of the compliance. From data gathering, notifications and processing activities to 3rd party suppliers, risk assessment and review processes, you can achieve compliance confidently and securely.
